

## CAHAYA

*The following information will provide you with all necessary details concerning mounting and maintenance of our products, so that you can enjoy using them every day for many years to come.*

### **MOUNTING**

*Cahaya wash basins are designed to be mounted in several different ways. They can be used as countertop wash basins on any type of surface or installed in fitted wash basin cabinets. It is also possible to mount the wash basin on the wall using special supports, provided that the supports are strong and rigid enough. Another option is to support the wash basin on a frame with legs. There are numerous possibilities - it depends only on how you want to use our product. We encourage you to check all the arrangement inspirations on our website. Whichever version you choose, remember to use mounting elements appropriate to the weight of the materials as well as the type of surface they are mounted to. To attach a wash basin to a substructure, we recommend using a mounting adhesive to glue the supports directly to the counter. To use a wash basin as a countertop, we suggest sealing the connection between the surfaces with silicone. Bear in mind that mounting wash basins directly with screws and bolts is not allowed. Using mechanical connections can result in damage to the surface and loss of warranty on our product. For wash basins without an overflow pipe, we do not recommend keeping the plughole closed all the time, so that water can flow freely, without the risk of flooding the bathroom.*

*Product weight: 15 kg*

### **MAINTENANCE**

*To create SEICHE wash basins we used Corian material, especially because of its appearance, durability and homogeneity, which contributes to its high hygienic standards, vital in bathrooms (both the material and the glue are attested by the National Institute of Public Health- National Institute of Hygiene). Its smooth surface is not permeable to liquids, which helps keep the product clean. It is best to remove any dirt and any kind of stains immediately, using a microfiber cloth with a bit of home-use cleaning agent e.g. Cif. Avoid applying excessive pressure while cleaning - use gentle circular movements. It is not advisable to use aggressive cleaning agents, such as acetone, trichloroethylene or strong acids and alkalis. In case of accidental spilling of strong chemical substances (e.g. paint removers, cleaning agents with dichloromethane, acetone etc.) quickly rinse the surface with a generous amount of water with soap. Remove spilled nail polish using non-acetone nail polish removers, and then rinse with water. Even though Corian material is very durable, long lasting exposure to strong chemicals might result in damage to its surface, and this kind of damage is not covered by warranty.*
